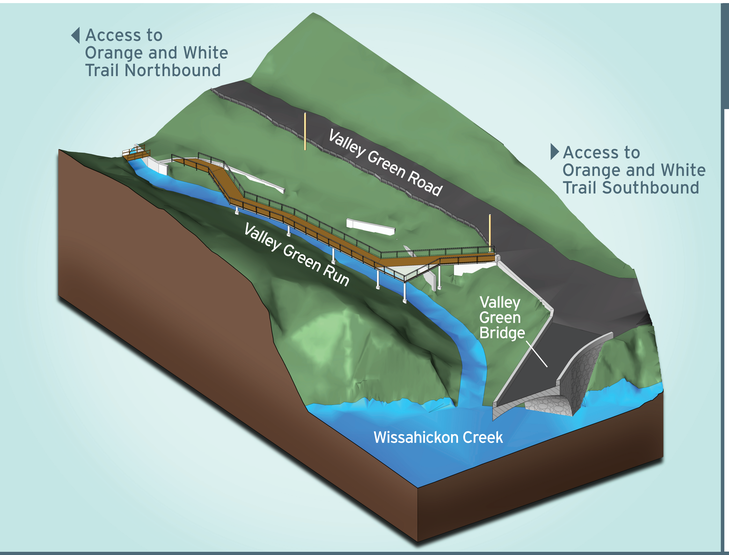
VALLEY GREEN RUN
RESTORATION AND PEDESTRIAN BRIDGE PROJECT

PARTNERS

Philadelphia Parks & Recreation — Find Your Path
Philadelphia Water Department



PROJECT DESCRIPTION

FOW is undertaking two simultaneous projects to:

1. Stabilize the eroding Valley Green Run with boulder revetments along the streambank and a series of boulder step-pools in the streambed.

2. Install a resilient new pedestrian bridge connecting the parking lot upstream on Valley Green Road to the greater Valley Green area and Forbidden Drive.

BENEFITS

- A stable, flood-tolerant stream that slows the flow of stormwater and reduces sedimentation
- A functional riparian buffer that will secure soils, improve habitat quality, and filter runoff from Valley Green Road
- A restored vital public gateway to the heart of the Wissahickon Valley Park
- Offer the quintessential Wissahickon experience to people of all abilities with an accessible, ADA compliant walkway.
